

They Are Purposely Killing The Gulf They Are Purposely Killing The Gulf

The private, foreign International Monetary/Banking Cartel controls its puppets in Washington as it controls its oil company executives. And everything the Cartel does is anti-life, there are absolutely no exceptions; and their pretended Gulf oil clean-up is a glaring case in point.

Instead of cleaning up the unprecedented catastrophe created by the Cartel's mega-corporations (Halliburton, Transocean, and British Petroleum), these very same companies are purposely killing our Gulf of Mexico, under the pretense of cleaning it up.

Instead of using safe, non-toxic ways to gather up the rogue oil gushing from their incompetence, or planned cataclysm, the private Cartel is using an extremely toxic chemical dispersant, with the approval of the Obama administration.

Alan Levine, the head of Louisiana's Department of Health and Hospitals, said: "We don't have any data or evidence behind the use of these chemicals in the water. We're now basically using one of the richest ecosystems in the world as a laboratory."

As reported in Britain's Telegraph, Louisiana state Secretary of the Department of Wildlife and Fisheries, Robert Barham reported: "We're very disappointed in their [EPA and oil company executives] approach. The federal procedures call for a consen-

sus between federal authorities, the responsible party and the states involved. When we met and expressed our concerns [over the use of dispersants], apparently they decided to go without us.”

And go they did. Obama’s Environmental Protection Agency allowed BP to turn our Gulf of Mexico into a toxic testing ground, instead of removing the crude oil.

British Petroleum (BP) has even refused to use their own oil tankers, lying in the Gulf, to suck up most of the runaway oil, and possibly salvage it for sale later, as was done after a Saudi spill in the ‘90’s. That method was so successful, it vacuumed up about 85 percent of that renegade oil.

Nick Pozzi, a former oil pipeline engineering and operations project manager is puzzled why BP did not salvage perfectly good crude oil for later sale, and to thereby protect marine and wildlife.

What Mr. Pozzi does not know is the oil companies are owned by the world’s only legal counterfeiters – the International Monetary/Banking Cartel - who can “print” all the money they want, so making money on Gulf oil was not important to them. Killing the Gulf of Mexico is, apparently, important to them, for their own cryptic and esoteric reasons.

If the Cartel had wanted to save marine life, any oil they had not vacuumed up could have been mulched with any number of non-

toxic materials, such as “Oil Sponge,” a name trademarked by Phase III, Inc.

Rated as the “best performing” absorbent by the US Army Corp of Engineers, Oil Sponge is 100% organic, and is made from renewable resources.

Oil Sponge is built using a microbial and nutrient package, capable of transforming oil hydrocarbons into a safe bi-product of carbon dioxide and water.

But, the governmental bureaucrats of the Obama administration, and the Cartel’s oil executives, had no interest in using an environmentally friendly product to clean up what is the greatest man-made environmental disaster of all time ... they were intent on making this unbelievable cataclysm far, far worse, and one that could never be cleaned up.

It cannot yet be proven that the Monetary Cartel purposely blew up their own wellhead, but the crimes they have committed in their so-called “clean-up” efforts are well documented, in spite of no corporate media outrage.

After the Exxon Valdez incident of March 1989, Mycelx of Georgia developed what looks like a paper towel to soak up to 50 times its weight in oil. And while this product is used from the Middle East to Europe to Canada it was of no interest to the parties Obama charged with cleaning up the Gulf of the floating oil those very same parties caused.

Even hair naturally separates oil from water, leaving large tar globs, in which mushrooms can then be seeded. And as the mushrooms grow, they digest the oil, leaving non-toxic organics, which can then be composed into soil, great for growing healthy vegetables.

Anyone who has ever had a bad hair day knows how well hair will retain oil. In fact, Lisa Gautier, president of Matter of Fact (website for hair salons) has collected 400,000 pounds of hair, and stuffed it all into nylons to be used as booms near Gulf shores.

This idea could have been a shot in the arm of our dying economy, by creating organic compose for the millions of nutrient depleted farm acres in the world. Also there could have been a viable cottage industry of collecting hair from salons.

And, hair is certainly a renewable resource, with most of us contributing. But neither Obama or the Cartel will ever do anything for our dying US and world economy, but ensure it dies, while feebly pretending to resuscitate it.

But in the world of what could have been, there's hay, sawdust, crushed volcanic rock, and even kitty litter that could have mulched with the oil on the surface of the Gulf waters, making for easy pick-up.

But, oil industry executives and their confederates in the Obama administration quickly made sure that all spewing oil would ei-

ther sink well below the surface, or never rise to it, so it could never be vacuumed up or neutralized.

Worse yet, these international criminals of humanity, and life in the Gulf, committed their dastardly deed of deeply submerging the floating oil with an extremely dangerous chemical dispersant that would deny all marine creatures oxygen, thus killing them, and marine plant life to boot, as major underwater currents carry the poisonous oil through-out the Gulf and into the Atlantic.

Trying to give this mass murder a positive spin, BP spokesman John Crabtree said his corporation had dropped more than 560,000 gallons of [toxic] chemical dispersants on the surface slicks and 28,700 gallons of the chemical at the subsea wellhead, 5,000 feet below sea-level.

Crabtree's justification for such an insane, criminal act was that the dispersants would drive the oil well below the water's surface, thus keeping it away from coastal shorelines. So instead of removing the oil, BP decided to make the oil even more toxic, and drive it deep into the ocean where it can never be retrieved, but will kill all marine life in its path.

Mandy Joyce, a marine sciences professor at the University of Georgia carefully chose her words about BP's deplorable dispersants: "Anything that requires oxygen will not be able to survive that water. The food web is going to change. You could stymie the entire production level of the Gulf of Mexico. That's a very real possibility."

BP's chemical dispersants contain 2-butoxyethanol, a compound that kills marine and wildlife, exactly the life our clean-up measures should try to save.

BP's chemical dispersants, currently being dropped by airplanes, break the crude oil into tiny droplets that sink well below the water's surface, where they form a giant cloud or plume, making it impossible to gather, as is the obvious intention.

And with this poisonous plume creating a dead zone, currently estimated to be about the size of Delaware and Rhode Island combined, hidden at about 3,000 feet of water, no one can place an accurate figure on how much oil has actually gushed into the Gulf.

And once this death dealing plume reaches the large, rapidly moving Loop Current, this oily cloud of doom could swing toward Florida and Cuba, killing the coral reefs and marine life there.

According to Stephen Howden, an oceanographer at the University of Southern Mississippi, the Loop Current could drag the oxygen destroying cloud into shallower waters thus potentially impacting the coral reefs and fisheries near Florida's coast.

University of Georgia's Mandy Joyce said, "It's a good thing the oil is not damaging the coast line, but to say everything is fine because its not hitting the coast is missing a very important part of this equation."

And I would say, Ms. Joyce's statement is a serious understatement.

Another person famous for misleading and under stated remarks is our president, Barack Obama.

There can be no denying that President Obama and his EPA regulators are accomplices to the crimes in the Gulf of Halliburton, Transocean, and British Petroleum by allowing these perpetrators of the disaster to be the ones in charge of the capping and clean-up efforts.

How much longer will our government allow these corporate criminals to fail with the capping of the oil gushers ,and making a dead zone of the Gulf of Mexico and perhaps the Atlantic ocean?

Thus far, President Obama has made a grandstand play by pretending to excoriate the oil company executives responsible for the Gulf tragedy for not taking responsibility.

Excuse me Sir, it's you who should have taken control and responsibility by tasking competent individuals and companies to cap this runaway well, and to clean up the mess, without destroying the entire Gulf of Mexico in the process.

And instead of excoriating the oil company executives and government bureaucrats who dumped over a half million gallons of toxic dispersants into the Gulf, you should be arresting them for crimes against humanity, not to mention marine and wildlife.

Additionally, Obama's teleprompter writers had the ignorance to state the ridiculous: "I know BP has committed to pay for the response effort, and we will hold them to their obligation," read Obama.

The very obvious point Mr. Obama, is you should have saved our Gulf of Mexico, by making sure Transocean, Halliburton, and British Petroleum had absolutely nothing to do with the clean-up efforts, rather than making them pay to turn the Gulf into a dead zone.

President Obama went on to say many parties, including the federal government should accept blame for the disaster, he stopped short of saying he, himself, should be imprisoned for his part in so destroying life in the Gulf.

"There is oil leaking. We need to stop it, and we need to stop it as soon as possible," said Obama.

It's not a leak, Mr. Obama. It's a volcanic gusher spewing out an Exxon Valdez every two to four days.

From whales and dolphins to sardines, from starfish to coral reefs, from microscopic organisms to all the fish in the sea, the Cartel has embarked upon killing, and will kill ... unless they are stopped. Are you man enough for the job, Mr. President?

J. Speer-Williams
